

# Slate Application

**Name : Vinod Parlapalli**

**College : RGU IIIT RKValley**

**Topic : Work Report**

- Understood the basic code which writes on black canvas screen with white color. Modified basic code such that we can write with different colors and widths and also implemented erase option.
- Created Preference Activity to store settings like background color, foreground color, paint width, eraser width permanently so that application can set those settings when it is restarted.
- Added color chooser, seekbar to Preference Activity to change foreground color, background color, paint width and eraser width instead of lists.
- Implemented multiple pages so that users can add and remove pages.
- Removed Menu Options and added a relative layout for Menu on top of the canvas screen.
- Presently working on save option and trying to improve UI using Fragments.
